thanks--my advice for the briefing is to stick as much as possible to what we've already given to omb, with a couple not extremely detailed slides that add some points specific to the international issues...

In coordination with Paul, I'll be pulling together a draft briefing for everyone's review tomorrow morning. Let me know if we there are additional issues to Paul's list below.

Karl, is there a draft of the process sheet we're also prepping for them?

**Subject:** Initial Thoughts for NSC Discussion

To get things moving in prep for tomorrow discussion with Margo and prep for pre-brief for Friday's NSC meeting

General thought is to run thru RFS2 nuts and bolts briefing and then incorporate issues / areas of interest with focus on international areas of interest in the rule and reactions. The following are my initial thoughts on the key areas that should be covered:

## **Key international areas of interest**

### Biomass / Feedstock Requirements

US ag / crops – Aggregate compliance with trigger and opt for ind record keeping or consortium

- o Int'l – ind or consortium based record keeping and map and track (with option for aggregate if county can provide sufficient data to support aggregate compliance)
- o US and Int'l Forest / non ag sector – record keeping – map and track or consortium

Grandfathering of Facilities for General Total Renewable Fuel Category Applies

Applying LCA assessment results to all domestic and foreign produced fuels of same feedstock/process/fuel pathways we have currently modeled

- o Also notation about petition process etc.

Registration requirements – same except for posting a bond. Similar as done in previous fuel programs.

Other thoughts, issues, ideas?
